

8. Build Top of Wall, Verts

- Using the catwalk, build the balance of the wall.
- Thread the vertical steel between the 1st & 2nd course as per the engineering details.
- Screw 1x4 (or 2x4) blocks on each corner, run a string line between, then adjust each Zuckle to align the wall to each stringline.

- **Strap first three courses of wall with a 4' 1x4 on outside corners to protect against blowout**
